Keywords : Lift Coefficient, drag polar, directional stability etc.		
Abstract : <p>Results of wind tunnel tests conducted on 1/6th scale model of Pilotless Target Aircraft Configuration-4 (modified and standard models) are presented in this report. This report contains basic aerodynamic characteristics on the modified model and the calibration of static pressure ports on both the modified and standard models. The tests were conducted in the Mach number range 0.2 to 0.9 and incidence range -5° to +12°.</p>
